Promises Make Friends, But it Takes Performances to Keep Them

Back in the days when fowls were fed nothing but corn and oats, their owners did not expect eggs throughout the year. Their birds laid only during the summer when bugs, worms, grass and grit were available on their free range. Today the chemist has analized the egg and knows its content, and the proper menu for the little manufacturer. A properly matured pullet well nourished and well cared for will produce eggs as naturally as the flower is produced from the bud. VITALITY EGG MASH is built for its purpose; zero weather or sunshine, makes no difference.
